

CSS Demo Preparation: Task-wise Demonstration Plan

Accounts Module

Task 1: Requisition to Asset Receipt Workflow

Scenario: Procurement of office equipment (10 laptops worth BDT 10,00,000)

Demonstration Flow:

- Create Purchase Requisition
- Submit for Approval (multi-level approval if applicable)
- Approval Confirmation
- Convert Requisition to Purchase Order (optional, if system supports)
- Warehouse/Store Receipt Entry
- Asset Registration (if applicable)

Key Focus Points:

- Approval hierarchy control
- Audit trail visibility
- Budget linkage (if integrated)
- Stock/asset update after receiving

Task 2: Budget vs Actual Comparison

Demonstration Flow:

- Create or define a budget for a specific department/project
- Record actual expenses against that budget
- Generate Budget vs Actual Report

Key Focus Points:

- Real-time variance tracking
- Overspending alerts (if available)
- Department/project-wise reporting
- Visual dashboards (charts/graphs if available)

Task 3: No-Cost Project Extension

Demonstration Flow:

- Select an existing project
- Extend project duration without increasing budget
- System validation to ensure no budget modification

Key Focus Points:

- Budget integrity enforcement
- Extension approval process
- Updated project timeline visibility

HR Module

Task 1: Attendance & Movement Tracking

Scenario 1: Outstation Movement During Office Hours

(A senior officer visits a bank or District Commissioner office)

Demonstration Flow:

- Employee checks out for official movement
- Define movement type (official duty)
- Check-in upon return

Key Focus Points:

- Differentiation between absence and official duty
- Time tracking and reporting
- Supervisor visibility

Scenario 2: Field Worker Attendance Tracking

Demonstration Flow:

- Mobile-based attendance (GPS-enabled, if available)
- Check-in/check-out from field locations

Key Focus Points:

- Location-based validation

- Real-time attendance logging
- Offline-to-online sync (if applicable)

Scenario 3: Cross-Branch Attendance (HQ to Branch Visit)

Demonstration Flow:

- Employee checks in from a different branch location
- System recognizes location and records attendance accordingly

Key Focus Points:

- Multi-location attendance flexibility
- Centralized tracking from HQ
- Visit logs and reporting

Task 2: Training Participation Control (No Overlap Rule)

Demonstration Flow:

- Assign an employee to a training program
- Attempt to assign the same employee again to a conflicting or duplicate training

Expected System Behavior:

- System should restrict duplicate/overlapping nominations

Key Focus Points:

- Validation rules enforcement
- Training history tracking
- Automated conflict detection

Final Instruction for Demo Delivery

- Each task should be supported with a **short screen recording** (1–2 minutes per task).
- Focus on **clarity over complexity**—avoid unnecessary steps.
- Highlight **decision points, validations, and system controls** rather than just navigation.
- Use **realistic data** (e.g., actual budget figures, employee roles) to improve credibility.
